ALTR

Pitch Deck Review.
Management & Media.

A read-only critique of the two 13-slide 2026 pitch decks. **All 26 slides inspected as rendered images.** Neither deck file was modified, compressed, or committed.

NOTES

26 SLIDES REVIEWED

4 SHIP-STOPPERS

12 PRIORITIZED FIXES

> Review of the two 13-slide pitch decks, 2026-11-02. **Read-only — neither deck was modified, compressed, or re-rendered.** Both are archived byte-for-byte in `decks/`, because the PDFs are the only copy on this machine and no editable source exists (see §7).

---

1. What was reviewed

	ALTR MANAGEMENT	ALTR MEDIA
File	`ALTR-Management.pdf`	`ALTR-Media.pdf`
PDF title	`ALTR MANAGEMENT · Pitch Deck`	`ALTR MEDIA · Pitch Deck`
Slides	13	13
Size	1440 × 810 pt (16:9)	1440 × 810 pt (16:9)
File size	**28,999,507 bytes (27.7 MB)**	**26,072,680 bytes (24.9 MB)**
Created	2026-09-17 16:32 EDT	2026-09-17 16:32 EDT
Toolchain	HTML → HeadlessChrome 153 → Skia/PDF	same

Every slide of both decks was inspected as a rendered image, not just as extracted text. Both files are archived unmodified in `decks/`, with checksums.

There is no editable source. Grepped every workspace and repo under `~/conductor` for distinctive slide copy ("Stop renting attention", "Six pillars", "brand architects") — zero hits. Only the PDFs exist. Every fix listed below currently requires rebuilding the slide from scratch in whatever tool produced it. See §7.

---

2. Verdict

These are good decks. Don't rewrite them — correct them.

The design system is real and it holds across 26 slides without drifting: corner brackets, numbered section eyebrows in mono (`03 / THE NETWORK ——`), the `ALTR | MEDIA · 04 / 13` footer, the faint grid, the circled logo mark, the hatch marks bottom-right. The "window chrome" motif (three dots, a header label, a right-aligned status chip) is used consistently for anything that represents live data — the rented-vs-owned chart, the network console, the team panel, the campaign report. That is a genuine visual argument: it makes the claims feel instrumented.

The palette is also *on-system* — the light slides use the same values as the existing ALTR deck palette in `01-clients-onboarding/mikayla-pricing-deck/deck/build.js` (`bg EBECDC`, `mint B6F2E5`, `ivory FFFFF0`, and the `purple 7C41F1` that shows up as the third window-chrome dot). Whoever built these decks was working from the established brand, not inventing a new one.

Specific things that work:

- **The VS slides (Management 11, Media 11) are the sharpest argument in either deck.** Old playbook in grey with × marks, the ALTR way in white with ✓ marks, a `VS` token between two cards. It does in one glance what the preceding five slides do in paragraphs.
- **Media 02 carries the whole thesis in one image** — the rented line peaking at `AD BUDGET ENDS` then decaying, the owned line crossing it and compounding. Nothing else in the deck needs to work as hard.
- **The positioning lines are real lines**, not filler: "Creators are brands. Not accounts.", "Agencies rent attention. We own it.", "The moat is ownership.", "Viral is a process, not luck.", "Losers die quietly in the lab."
- **The shared ecosystem slide (12 in both) is handled well.** Same three rows, but each deck highlights its own row in mint. Someone who receives both decks sees the family resemblance as intentional rather than lazy.
- **Light-slide rhythm breaks are well placed** — Management 03 (mint) and 10 (bone), Media 03 (mint), 08 (ivory) and 10 (bone). They land exactly where the deck needs a breath.

---

3. Ship-stoppers

Fix these before the next send.

3.1 The Management PDF cannot be emailed — 27.7 MB over a 25 MB cap

Gmail, Outlook and most clients cap attachments at 25 MB. `ALTR-Management.pdf` is 27.7 MB and will be rejected or silently converted to a Drive link. `ALTR-Media.pdf` at 24.9 MB clears it by about 140 KB — that is not margin, that is luck.

The weight is raw full-resolution imagery: the chain hero render (used four times, see §6.1), twelve celebrity headshots and eight brand logos on Management 09. None of it needs to be at source resolution for a 1440 × 810 slide. Downsampling to 150 dpi should land both decks in the 3–6 MB range with no visible loss on screen or in a normal projector.

Recommendation: keep the current files as the print/present masters and produce a second `-email.pdf` of each. Do not compress over the originals.

3.2 The close slides have no contact details

Both closes carry a URL and nothing else. No name, no email, no phone, no Instagram handle, no calendar link. If the deck is forwarded internally — which is exactly what happens to a good deck — the recipient has no way to reach a person. Add a name and an email at minimum.

3.3 Management 07: the headline and the chart describe different time periods

The proof panel is chipped `FIVE CONSECUTIVE MONTHS` in its header, and under that header sits both the stat stack and the chart:

STATED IN THE PANEL	READABLE IN THE CHART
`GROSS ON-PLATFORM $5.97M`	M1 $95K → M2 $167K → M3 $217K → M4 $235K → M5 $238K

STATED IN THE PANEL	READABLE IN THE CHART
`NET $4.78M`	**five-month net total ≈ $952K**
`FAN MESSAGING $3.8M`	
`5-MO NET GROWTH +150%`	✓ matches (95 → 238 = +150%)

The internal ratios are clean and defensible — net is 80.1% of gross, which is exactly the platform cut, and fan messaging is 79% of net. The growth figure matches the chart. **The numbers are fine; the label is wrong.** $4.78M net against a five-month chart totalling ~$952K means the stat stack is lifetime-to-date and the chart is the last five months, but the header chip claims the whole panel is five months. Any prospect who adds the five bars reads the headline as inflated roughly 5–6×, and once they think one number is inflated they discount all of them.

Secondary: the panel mixes units. It is titled `GROSS ON-PLATFORM`, but the M5 tooltip reads `$238K NET` and the growth row reads `5-MO NET GROWTH`. Pick gross or net for the chart and say which.

Fix: label the stat stack `LIFETIME TO DATE` (or `SINCE ONBOARDING`) and the chart `LAST 5 MONTHS · NET`. No number has to change.

3.4 Management 09: third-party names and marks used as endorsement

The roster slide shows twelve celebrity headshots under the header `PAST & PRESENT CLIENTS · TALENT` — Floyd Mayweather, Diplo, Snoop Dogg, Wiz Khalifa, The Chainsmokers, Tiësto, Big Sean, Polo G, Swae Lee, Paris Jackson, Lele Pons, Big Meech — plus eight brand logos under `BRAND WORK`: Red Bull, Casamigos, Revolve, Sony Music, Universal Music Group, Rolling Loud, Liquid Death, Walmart.

Two separate problems:

1. **Permission.** Names, likenesses and registered marks are being used in commercial collateral as implied endorsement. Right-of-publicity and trademark exposure here is real and it is cheap to reduce — confirm which of these are contractually citable, and drop or relabel the rest.
2. **Implication.** `20+ CREATORS UNDER ACTIVE EXCLUSIVE MANAGEMENT` is set in 96pt directly to the left of those twelve faces. The slide reads as "*these are the 20+.*" If the actual relationship is event work, brand campaigns, or past one-off engagements, the slide is overclaiming by adjacency even though no single line is false.

Fix: split the row honestly — `EXCLUSIVE ROSTER` (the actual 20+, even if unnamed) separate from `WORKED WITH · EVENTS & CAMPAIGNS` (the names), and keep only marks you can evidence.

4. Data integrity

Every hard number in both decks, and whether the two agree.

CLAIM	MANAGEMENT	MEDIA	STATUS
`20+ exclusive creators`	01, 09, 13	—	consistent
`$5.97M flagship gross`	01, 07, 13	—	see §3.3

CLAIM	MANAGEMENT	MEDIA	STATUS
`$4.78M net`	07	—	**conflicts with chart — §3.3**
`$3.8M fan messaging`	07	—	see §3.3
`+150% 5-mo net growth`	07	—	✓ matches chart
`LA · MIA content houses`	01, 04	—	consistent
`2,000+ owned pages`	04, 05, 09, 11, 12, 13	01, 02, 03, 04, 12, 13	consistent
`580,339 accounts reached`	08 (as "580K")	09 (full figure)	✓ agree
`1,013,909 impressions`	08 (as "1M+")	09 (full figure)	✓ agree
`+529% impressions`	08	01, 09, 13	✓ agree
`98.8% non-followers`	08	01, 09, 11, 13	✓ agree
`572K reach from reels`	—	09	Media only
`+718% non-follower growth`	—	09	Media only

Cross-deck numbers are clean — rounding is the only difference and it rounds honestly. The one real defect is §3.3.

4.1 The evidence base is one account and one campaign

Both decks rest on the **same single 30-day creator case** (580,339 / 1,013,909 / 98.8%), and the Management deck adds exactly one managed account. Anyone who receives both decks sees the identical proof twice, which makes the evidence base look thinner than it probably is.

Two gaps follow from that:

- **Management never says anything about the other 19+ creators.** No average result, no retention rate, no median revenue lift, no "a typical creator does X in month three." One flagship account is being asked to prove a 20-creator agency.
- **Media never states the network's actual scale.** The entire thesis is owned distribution at scale, and the deck says "2,000+ pages" nine times without once stating how many people those pages reach. A buyer's first question is "*what's the combined monthly reach of the network?*" and the deck has no answer on any slide. One aggregate figure — total followers across the network, or monthly impressions network-wide — would do more for the Media deck than any other single addition.

4.2 Media 03/04: the network console is illustrative

The console lists 21 handles (`music.daily`, `luxe.life`, `street.style`, `court.side`, `moto.scene`…) with `▶ PUSHING` status chips. These read as representative placeholders rather than real page names. That is a reasonable design choice — you probably don't want to expose the real network — but it invites "*can I see the pages?*", and the deck has no prepared answer. Either label the panel `ILLUSTRATIVE` or have a response ready. The slide itself is the best visual in the Media deck, so this is a talk-track note, not a design change.

5. Narrative

ALTR Management (creator-facing)

`01 cover → 02 problem → 03 who we are → 04 six pillars → 05 your team → 06 creator evolution → 07 proof: one account → 08 proof: marketing engine → 09 roster → 10 the deal → 11 why → 12 ecosystem → 13 close`

- **Proof arrives at slide 7 of 13.** Slides 02–06 are five consecutive promise slides before a single number lands. For a cold creator who doesn't know ALTR, that is a long way to read on trust. Moving slide 08 (580K / 1M+ / 98.8% — the cleanest, least ambiguous proof in either deck) to position 3 or 4 would fix this without restructuring anything.
- **Slide 06 "The Creator Evolution" is the weakest slide.** A seven-step roadmap where step 06 is "*Global mobility — investment-based U.S. visa pathways.*" That is the furthest thing from the core offer, it is the hardest claim in the deck to deliver on, and it sits on a slide where nothing else is substantiated either. Either cut to five steps or be ready to explain the visa claim in detail — a creator who asks about it and gets a vague answer discounts the other six steps retroactively.
- **Slide 10 "The Deal" never states the take.** "Performance-aligned revenue share," "the take scales with the growth we actually drive," "no big retainers, no upfront management fees" — no percentage, no range. Defensible if the number is always negotiated, but the slide is titled *The Deal* and doesn't contain one, which invites the question immediately.
- **Minor contradiction on the same slide:** "We only win when you win" (headline) vs "Transparent add-ons … scoped and billed as needed" (item 03). Add-ons bill regardless of performance. A one-clause acknowledgement — "*at cost, never marked up*" or similar — closes it.
- **Audience is slightly mixed.** Slides 02–06, 09–10 speak to "you" the creator; the `PITCH 2026` label, the proof slides and the ecosystem slide have an investor flavour. It works as a creator-recruitment deck. If it is also being used with investors it needs a different proof slide — roster economics, retention, revenue per creator, agency-level revenue — not one flagship account.

ALTR Media (client/brand-facing)

`01 cover → 02 thesis → 03 mission → 04 the network → 05 who rides the engine → 06 service lines → 07 how a campaign works → 08 the feedback loop → 09 proof → 10 commercial models → 11 why → 12 ecosystem → 13 close`

Structurally tighter than Management, and the thesis lands on slide 2 instead of slide 7.

- **Slide 08 "The feedback loop" is buried.** "*Hooks get validated across thousands of posts before a single dollar of your momentum is spent on them. Winners become strategy. Losers die quietly in the lab.*" That is the most defensible differentiator in either deck — it is the one thing a competitor with an ad budget structurally cannot copy — and it arrives eighth, after five slides of setup. It belongs at 03 or 04, right behind the thesis.
- **Slide 03 "Mission" is the one skippable slide.** Control / Deploy / Own restates slide 02 with less force. If anything gets cut to make room for a network-scale slide (§4.1), cut this.
- **Slide 10 "Commercial models" has no anchors.** Six ways to buy, no numbers — not even a "campaigns from $X." For a deck whose job is to produce an inbound quote request, one starting price would qualify leads before they

reach the form.

- **Slides 06 and 07 are thin.** Both are a single row of text in the top half with the bottom 40% empty. The restraint reads as confidence elsewhere in the deck; on these two it reads as a slide that didn't finish.

---

6. Cross-deck consistency

6.1 The hero image appears four times

The same abstract chain render is the cover of both decks *and* the close of both decks. Anyone who receives both — which is the explicit plan, given the ecosystem slide and the "full-stack bundle" model — sees it four times. Each deck should have its own hero. The chain reads as "ALTR" generally; it says nothing specific about either management or distribution.

6.2 The quote domain is shared on purpose

Both closes read `quote.altrservices.com`. That is the **shared intake form for all three companies**, not a Media or Management deck pointing at the Services brand by mistake — recorded here so it does not get re-raised as a defect. The only open question is cosmetic: the visible string says *altrservices* on sheets badged Media and Management. If the umbrella domain from domain-research is ever registered, a neutral alias onto the same form would read cleaner across all three. Not a problem today.

6.3 The third company has two names, two slides apart, in the same deck

- Media **10**, model 06: "***Media, Signal, and Management*** *combined as one engagement.*"
- Media **12**: the third row is labelled **`SERVICES`**.

`ECOSYSTEM.md` calls it "ALTR Services (Signal)", so both are defensible in isolation — but not two slides apart in one deck. Pick the client-facing name and use it everywhere. Given the shared quote form already lives on `altrservices.com`, **Services** is the consistent choice.

6.4 Typographic orphans in the mono labels

Two slides break a mono label across lines in a way that reads as a bug:

- Management **04**: `MONETIZATION TO WELLNESS. ONE` / `TEAM.`
- Media **04**: `OWNED NICHE PAGES ACROSS INSTAGRAM & SHORT-` / `FORM`

The Media one is worse — breaking on the existing hyphen of "short-form" looks like a rendering fault. Both need a narrower container or a manual break.

7. Production

No HTML/CSS source exists for either deck anywhere on disk. Every correction in this document — including a two-word label change on Management 07 and a URL swap on both closes — currently requires rebuilding the slide from nothing.

This is the most expensive problem in the review, because it is the one that makes every other problem expensive. Recommend recovering the source if it still exists in the originating tool, or recreating it in-repo. The precedent is already here: `01-clients-onboarding/mikayla-pricing-deck/deck/` (pptxgenjs `build.js` + Keynote `render.sh`), and its palette constants already match these decks.

Not scoped as work here — flagged for a decision.

8. Prioritized fix list

#	FIX	WHERE	WHY
1	Label the stat stack lifetime, the chart last-5-months	Mgmt 07	§3.3 — currently reads as ~5× inflated
2	Produce ~3–6 MB `-email.pdf` copies; keep originals as masters	both	§3.1 — Management can't be attached at all
3	Split roster into exclusive roster vs worked-with; keep only evidenced marks	Mgmt 09	§3.4 — publicity/trademark exposure + overclaim by adjacency
4	Add a name and an email to both closes	both, slide 13	§3.2 — forwarded decks currently dead-end
5	Add one network-scale figure (total followers or monthly impressions)	Media, new slide	§4.1 — the core thesis is never quantified
6	Settle Services vs Signal; apply everywhere	Media 10 & 12	§6.3 — contradicts itself two slides apart
7	Give each deck its own hero image	both, 01 & 13	§6.1 — same render four times
8	Move the cleanest proof earlier (Mgmt 08 → ~04; Media 08 → ~04)	both	§5 — best evidence arrives too late in both
9	Fix the two mono-label line breaks	Mgmt 04, Media 04	§6.4 — reads as a rendering fault
10	Add roster-level results, not just the flagship account	Mgmt, new slide	§4.1 — one account proving a 20-creator agency
11	Add a price anchor	Media 10	§5 — six models, no numbers
12	Recover or rebuild editable source	—	§7 — makes fixes 1–11 cheap instead of expensive

Notes

- The Media deck is **ALTR Media Group** material and sister-company projects don't live in this repo per `CLAUDE.md`. This review covers both decks because they are one coordinated pitch set and the Media hub repo doesn't exist yet (see the open item in 06-ops-admin/TASKS.md). The *assets* were deliberately not filed here — only this review.
- Deck stats were read from the PDFs as rendered. Nothing in this document was verified against source platform statements, bank records, or contracts; §3.3 is a labelling conflict found inside the deck, not an audit of the underlying figures.
- A print version of this document is `ALTR-Pitch-Deck-Review.pdf` (9 pp., Letter). Rebuild it with `node build.js` after editing this file — pandoc → `style.css` → headless Chrome, the same route the decks themselves were rendered with.
